NativeScript - transparent modal

Para habilitar transparência em um modal usando nativescript, no módulo `page.ios.js`, altere o método `_showNativeModalView` da seguinte maneira:

As seguintes linhas

page.ios.js -> _showNativeModalView

```
_super.prototype._raiseShowingModallyEvent.call(this);
parent.ios.presentViewControllerAnimatedCompletion(this._ios, utils.ios.MajorVersion >= 7, null);
var transitionCoordinator = parent.ios.transitionCoordinator();
if (transitionCoordinator) {
    UIViewControllerTransitionCoordinator.prototype.animateAlongsideTransitionCompletion.call(transitionCoordinator, null, function
() { return _this._raiseShownModallyEvent(); });
}
else {
    this._raiseShownModallyEvent();
}
```

Para

page.ios.js -> _showNativeModalView

```
_super.prototype._raiseShowingModallyEvent.call(this);

var that = this
this._ios.providesPresentationContextTransitionStyle = true;
this._ios.definesPresentationContext = true;
this._ios.modalPresentationStyle = UIModalPresentationOverFullScreen;
this._ios.view.backgroundColor = UIColor.clearColor(); // can be with 'alpha'

parent.ios.presentViewControllerAnimatedCompletion(this._ios, utils.ios.MajorVersion >= 8, function(){
    that._ios.modalPresentationStyle = UIModalPresentationCurrentContext;
    that._raiseShownModallyEvent(parent, context, closeCallback)
});
```
