IOS Change status bar text color and background color

In Info.plist add:

```
<key>UIStatusBarStyle</key>
<string>UIStatusBarStyleBlackTranslucent</string>

<key>UIViewControllerBasedStatusBarAppearance</key>
<false/>
```

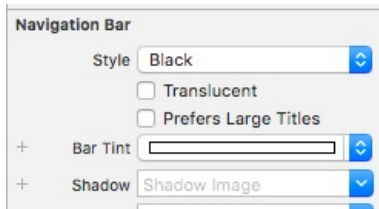

So you can hide navigation bar and save text color.

In AppDelegate add:

```
func setStatusBarBackgroundColor() {
    guard let statusBar = UIApplication.shared.value(forKeyPath: "statusBarWindow.statusBar") as? UIView else { return }
    statusBar.backgroundColor = UIColor.init(red: 65/255.0, green: 65/255.0, blue: 66/255.0, alpha: 100.0)
}
```

And call this function in `didFinishLaunchingWithOptions`. This make status bar background color dark.

In NavigationBar Storyboard change style to Black and uncheck Translucent box, like this:

This make status bar text color white.

Result:
